UPDATE IN NEURO-ONCOLOGY

Friday, May 7, 2010

Currently, over 2,000 scientific articles are published in the field of neuro-oncology each year, resulting in profound changes in the management for patients with these diseases. Most clinicians do not have time to succinctly review all of these articles, so this conference will assist them in being up-to-date on the latest treatment strategies for this disease. This activity is held on a yearly basis to summarize and relate new developments in care for patients suffering from malignant brain tumors.
