

NIH funded postdoctoral fellowship positions are available to study *Morphogenetic Signaling Network in Development and Disease*. Areas of interests include craniofacial morphogenesis, skeletal development, body axis determination, neural development, breast development, congenital deformities and cancers. Projects focus on molecular and cellular mechanisms underlying development of lineage-specific stem/progenitor cells. Developmental Genetics is the strength of this enthusiastic team. Priority will be given to candidates with PhD degree and experience in developmental biology, stem cell biology, genomics or proteomics. Visit website: <http://www.urmc.rochester.edu/biomedical-genetics/faculty/wei-hsu-lab.cfm>  
Submit your application including a cover letter, CV and names of three references to **Dr. Wei Hsu (Email: [wei\\_hsu@urmc.rochester.edu](mailto:wei_hsu@urmc.rochester.edu))**.
