

---

## STIPEND

---

Stipend support is commensurate with the previous training and experience of each fellow. Fellows receive malpractice and health insurance.

---

## ELIGIBILITY

---

Candidates should have finished a family practice residency program and be board eligible or certified in family practice. A strong background in the psychosocial aspects of care is desirable.

---

program developing clinical,  
teaching and research skills  
for family physicians*

---

UNIVERSITY OF  
**ROCHESTER**  
MEDICAL CENTER

*An equal opportunity/Affirmative Action employer.*

---

## ABOUT THE FELLOWSHIP

---

The Department of Family Medicine and the Division of Family Programs in the Department of Psychiatry at the University of Rochester School of Medicine offer a unique two-year fellowship in *Family Systems Medicine*. This fellowship provides academic family physicians with clinical teaching and research skills in family systems medicine. The curriculum is tailored to meet the interests of each fellow.

---

## CLINICAL

---

The fellowship provides a multi-faceted experience that enhances prior clinical medicine training, focuses on family systems medicine and the implementation of the biopsychosocial model, and develops more advanced primary care family counseling and family therapy skills. Each fellow maintains a medical practice at the Family Medicine Center and develops specific clinical skills in biopsychosocial medicine under supervision. In addition, fellows participate as externs in the Family Therapy Training Program, where they take seminars on family therapy theory and technique and receive live supervision of family therapy cases. Fellows may elect to receive additional family therapy training toward clinical certification by the American Association for Marriage and Family Therapy.

---

## TEACHING

---

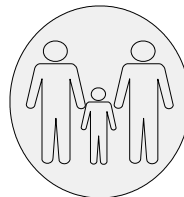

We believe that the best teachers of the biopsychosocial and family systems approach to health care are specially trained family physicians working in collaboration with behavioral scientists. Fellows receive advanced training in teaching the biopsychosocial model and family systems medicine to residents and medical students. They co-teach with faculty in the psychosocial and family systems medicine curriculum, and supervise residents in the hospital and the Family Medicine Center.

---

## RESEARCH

---

Research is essential for the development and advancement of academic family physicians. There is an acute need for research on the interaction of families and health. Fellows develop the knowledge and skills to plan, conduct and publish family and health research. Courses are offered in biostatistics, epidemiology and research design. During the two years, each fellow participates in ongoing family research and completes his or her own research project. A fellow can choose to take additional course work to obtain a Masters of Science degree in Community Health.

---

## SETTING

---

The Department of Family Medicine, in close collaboration with the Division of Family Programs of the Department of Psychiatry, has established a national reputation for leadership and expertise in family systems medicine, and developed an innovative psychosocial curriculum. The Division of Family Programs is internationally known for its Family Therapy Training Program and the Wynne Center for Family Research. This fellowship builds on a reputation of excellence in both family medicine and family therapy as well as an integration of training and research in the biopsychosocial model.

---

## FACULTY

---

Co-Directors of the Family Systems Medicine Fellowship:

Thomas L. Campbell, M.D. and  
Susan H. McDaniel, Ph.D.

Richard J. Botelho, M.D.
