

Prevent and Control High Blood Pressure:

What you should know about preventing and controlling high blood pressure

High blood pressure (also called hypertension) increases your chances of having a heart attack, heart failure, stroke, kidney disease, and other life-threatening illnesses. Anyone can get it, and as you get older, the likelihood of your developing high blood pressure increases. If you are overweight or obese or if you have diabetes, the odds are even higher.

KNOW YOUR NUMBERS

High blood pressure is called “THE SILENT KILLER” because there are often no symptoms. Your numbers are your only warning.

Normal blood pressure

The pressure of blood in the vessels when the heart beats:

systolic pressure

120/80 mmHg

millimeters of mercury

The pressure between beats when the heart relaxes:

diastolic pressure

High blood pressure

140/90 mmHg or higher

Prehypertension

120/139 and/or
80-89 mmHg

Normal blood pressure

less than 120/80 mmHg
