SUBJECT: Change in Immunoglobulin Analyzer Methodology

DATE: October 6, 2010

On Wednesday October 6th, the URMCLabs at Strong Memorial Hospital will be moving the following assays from the Beckman Immage to the Roche platform:

IgA	IgM
IgG	Prealbumin

With this new platform, changes to both the result reference ranges and age ranges will occur. The current and new ranges can be referenced in the attached chart.

We understand that changes such as this can be challenging, and we will make every effort to accomplish this transition with minimal disruption to patient care. If you have any questions, please contact Dr. Kwong via the methods listed above or the Automated Lab Chief Supervisor Barbara A. Meiklejohn @ 275-2435 or via e-mail: Barbara_Meiklejohn@URMC.Rochester.edu
