**SUBJECT:** Result Reporting Change for TIBC

**DATE:** November 7, 2011

Starting on 11/7/11, URMCLabs will change to reporting a measured TIBC (Total Iron Binding Capacity) result. Previously it had been calculated based on the UIBC (Unsaturated Iron Binding Capacity) result. The TIBC reference range remains the same (250-450 ug/dL) and there is no change to the sample requirements. The following tests will be reported as part of the TIBC profile: Iron, TIBC and % Transferrin Saturation (calculated). The UIBC result will not be calculated or reported.

Any questions can be directed to Dr. Tai Kwong, Laboratory Director via e mail at [Tai\\_Kwong@urmc.Rochester.edu](mailto:Tai_Kwong@urmc.Rochester.edu) or by calling x5-5654.
