**RE: Change in Urinalysis Macroscopic Reporting**

**DATE:** April 23, 2010

In an effort to standardize reporting across several laboratory sites, URMCLabs will be implementing changes to the macroscopic urinalysis reports effective April 26, 2010. Urinalysis **Protein** and **Glucose** results will be changed from the current range to a single value mg/dL. The methodologies remain test strip based and these values continue to represent semi-quantitative results.

The laboratory will make every effort to make this transition with as little disruption to patient care as possible. If you have any questions concerning these changes, please contact us via the methods listed above.
