SUBJECT: Swab change

DATE: November 30th, 2009

We have upgraded our collection swabs for routine bacterial cultures to a dual swab system. This system can be used just as you would a single swab. Dual swabs are beneficial for offices performing point-of-care screening for Group A streptococcus and provide our laboratory with extra material for testing.

While it is most prudent to maintain one style of swab in our inventory, we realize that there may be instances when the dual swab does not meet your needs. In these instances, please contact us to see how we can best accommodate your situation.
