

Clinical Transformation Project (CTP)

Acute Care
EMR

Core “clinical information system” provides a shared EMR URM-wide. This includes – but is not limited to – order management, nursing documentation, and physician and pharmacy portals.

Middleware

Next-generation interface engine; links new EMR with existing systems that will be maintained (i.e., Allscripts Touchworks, HBOC Star, and Flowcast).

EMPI

Enterprise Master Patient Index synchs patient ID numbers – and records – at Strong and Highland.

BI/EDW

Marries financial analytics and clinical analytics; Enterprise Data Warehouse (EDW) supports research.

Community
Network

Better supports URM’s referring network; runs complementary to Rochester RHIO.
