

Current. Comprehensive. Continuing Education Online.

**Overarching Principles:** After completing the program modules, **Antepartum/Postpartum** participants should be able to:

- Identify factors that place the maternal-fetal unit at risk.
- Discuss the clinical nursing assessment and nursing management of common, obstetric problems.
- Discuss required assessment, drug options, dose, and evaluation of pharmacotherapeutic agents and their impact on the maternal-fetal unit and/or neonate.
- Recognize and discuss the physiologic factors affecting the maternal-fetal unit.
- Develop nursing care plans that promote prevention. (CNE only)

Objectives may change without notice. Please check each case for individual learning objectives and overarching principles.
