**Overarching Principles:** After completing the program modules, **Gynecology** participants should be able to:

- Discuss the reproductive system’s physiology and pathophysiology related to gynecologic nursing care.
- Increase nursing knowledge about routine screening recommendations throughout the women’s lifecycle.
- Discuss nursing strategies to promote health and wellness throughout the women’s lifespan.
- Discuss common gynecologic diagnoses and the related nursing: assessment, interventions, treatment options, care plans, and strategies.
- Discuss required assessment, drug options, dose, and evaluation of pharmacotherapeutic agents and their impact on women. (CNE only)
- Educate patients about contraceptive options.
- Review common over-the-counter treatments advertised for women. (CNE only)
- Identify cultural factors influencing the nursing care of patients. (CNE only)
