NEW! *The Little Book of* MENOPAIISE

A compilation of our best menopause essays in one easy-to-read resource for both patients and providers.

Considerable confusion exists among women and their care providers regarding the biology of the menopause. Why do these menopausal symptoms appear? How long do they last? What is their impact on personal lifestyle? And what safe measures can be employed to modify them? These essays will address the role of inflammation as the underlying cause of most of the menopause symptoms, the biologic impact that loss of estrogen plays in this process and the role that hormone replacement serves to reduce these symptoms. Our understanding of the biology of menopause now makes it possible for care providers to embrace care of the menopausal woman with the same level of professionalism as they apply to obstetrics and gynecology of younger women. Our book provides a resource for both the patient and the provider!

NEWS

We are excited to announce the launch of a new continuing education certificate starting this July. Our new combined certificate will allow periFACTS® participants to choose their credit type earned upon successful course completion. Each course will now be eligible for the same number of CNE Contact Hours or CME credits, which will increase the total annual CME credits that may be awarded to our CME participants.
