Matt Ingalls With Poster

Matt Ingalls with other award winners

GDSC student Matt Ingalls won an award for his poster presentation at the 2019 Gordon Research Conference for Salivary Glands and Exocrine Biology in Galveston, Texas (February 2nd – 8th). The GRC brought together leading researchers in the field of salivary gland biology from around the world. Matt's poster, titled "Lineage Tracing Following Radiation Treatment Unveils Intrinsic Regeneration Potential in Adult Salivary Glands", highlights differences in radiation response between the submandibular and parotid salivary glands. Utilizing lineage tracing models his work demonstrates the intrinsic regeneration potential of the adult salivary gland. The NIH-supported research was conducted in the laboratory of Dr. Catherine Ovitt and was co-authored by E. Maruyama and P. Weng. -- Congratulations Matt!
