Developmental and Behavioral Pediatrics Clinical Services

MEDICINE of THE HIGHEST ORDER

Rev. 2/17

MEDICINE of THE HIGHEST ORDER

Developmental and Behavioral Pediatrics

We specialize in the evaluation and treatment of children and teens with known or suspected disabilities.

Diagnostic Evaluation Service

Our team evaluates children suspected of having a developmental disability such as autism, intellectual disability, or fetal alcohol syndrome.

Developmental Disabilities Follow-up Program

Our team monitors and treats health and behavior issues in children diagnosed with a developmental disability. We work with your child's primary care medical home. Families see our team every 3 - 12 months (based on age and concern).

Levine Autism Clinic

We provide ongoing medical care and behavioral supports to children with autism spectrum disorder. Our team of experts works with families to monitor health and developmental progress, treat feeding problems and other behavioral challenges, and make sure families are connected with the right community supports.

Kirch Motor Development Program

We evaluate and treat children with motor delays and disabilities (such as cerebral palsy, spina bifida, or Rett syndrome). Our experts work with your family and child. We treat health, development, and behavior challenges.

Infant-Toddler Developmental Program

This team monitors the health and development of children born early or who had other serious health problems in infancy.

Pediatric Feeding Disorders Program

The feeding team evaluates and treats children with serious feeding problems (food refusal, extreme selectivity, disruptive mealtime behavior). We address developmental, medical, and nutritional needs; behavioral status; and oral-motor skills. We also provide Nutrition Services and offer a Pill Swallowing Program.

Behavior Treatment Services

Our team provides assessment and short-term treatment for children and teens with developmental delays or disability and challenging behaviors.

Monroe County Crisis Intervention Program

This program is for children and adults experiencing a behavioral crisis. Our team visits the school or home. We provide behavior assessment, treatment planning, and family/team training. Individuals must have OPWDD eligibility and live with their family in Monroe County.

The Intake Process

Crisis Intervention - Call (585) 275-5599

All Other Programs - Call (585) 275-2986

We will ask for

- Our "family form" (we can mail it to you or you can download it from our website)
- Your child's school or early intervention records
- A school feedback form
- Medical information from your child's primary care provider

Your Appointment

Appointments can be long. Bring snacks and toys for your child. Consider bringing a second adult. Avoid bringing siblings if possible.
