Over the past several years, advances in the field of cancer genetics have given patients the opportunity to determine their predisposition to certain cancers, including breast cancer, to help initiate proper medical management. Although multiple risk factors for breast cancer are known, personal and family history of cancer are key elements impacting cancer risk.

This presentation will review:

- Elizabeth Wende Breast Care’s genetic counseling program
- Eligibility criteria for testing
- Impact of genetic testing on the way people are screened for cancers

Refreshments provided.

Provided in partnership with: Center for Community Health & Prevention and Elizabeth Wende Breast Care.

Wednesday, November 29 at 1 p.m.
Mt. Morris Village Hall, 117 Main Street,
Mt. Morris, NY 14510
