

# Do you want to improve the health of your community?

*“Community-based participatory research (CBPR) in health is a collaborative approach to research that equitably involves all partners in the research process and recognizes the unique strengths that each [partner] brings. CBPR begins with a research topic of importance to the community with the aim of combining knowledge and action for social change to improve community health and eliminate health disparities.”*

~ W. K. Kellogg Foundation

## Community-Engagement in Research - Community-Based Participatory Research (CBPR) Training Program

Learn about a new seven-week program that aims to train community members and University of Rochester researchers in community-engaged research using CBPR principles. The course offers an introduction to CBPR principles from the foundations, to communication, funding, and sustainability. The training is offered at no cost in February and March 2018 and co-facilitated by community partners and University of Rochester researchers. Program participants are eligible to apply for pilot funding.

### Learn more about the Program

Join us for dinner to meet course facilitators and research teams doing CBPR, learn about the program structure and how to register for the course.
