Principles, Methods, and Systems for Designing for Dissemination, Sustainability, and Equity

Bethany M. Kwan, PhD, MPSH

October 24, 2022

Presentation to UR CTSI EQ-DI

Learning Objectives

Upon completion of this session, participants will be able to:

1. Describe the principles of Designing for Dissemination, Sustainability, and Equity (D4DSE): beginning with the end in mind, ensuring innovation-context fit, and planning for active dissemination
2. Identify frameworks and methods useful for designing and disseminating a range of research products from a D4DSE perspective
3. Describe the phases of the Fit to Context Framework for D4DSE

Barriers to Dissemination and Sustainability

Poor fit between health innovations and intended context for use

Research paradigms used to develop and test programs

Cultures and systems that fail to incentivize and support active dissemination and translation of evidence into practice

Designing for Dissemination and Sustainability (D4DS)

Principles and methods for:

Enhancing the fit between a health program, policy, or practice and the context in which it is intended to be adopted

Early and active dissemination and sustainability planning.

Designing for dissemination

the process of ensuring that the products of research are developed to match the contextual characteristics of the target audience and setting for intended use

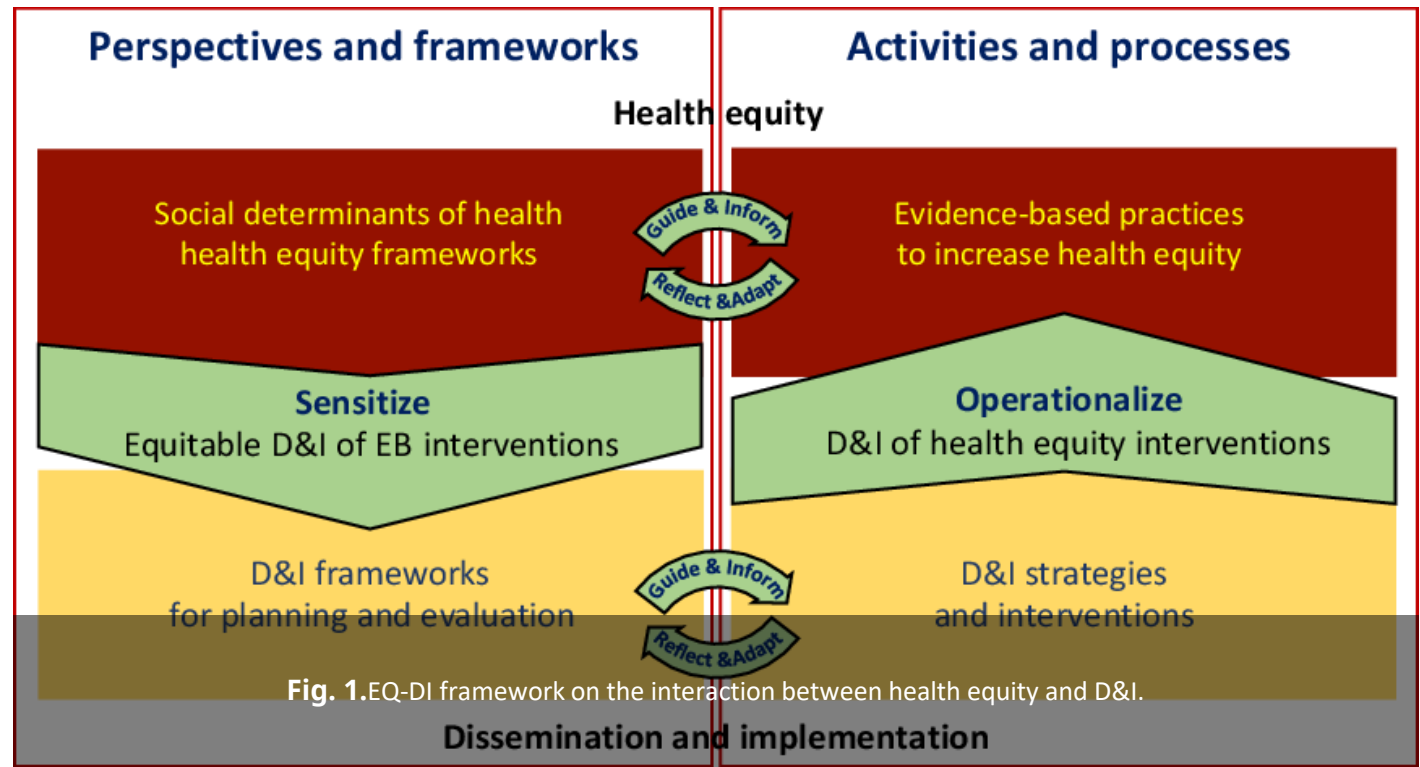

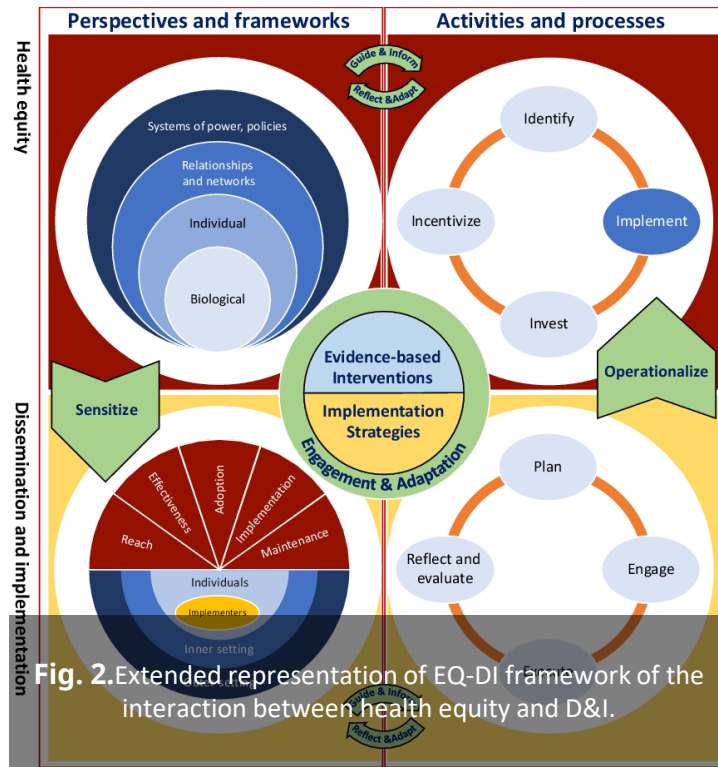

Designing for sustainability

early planning and design processes designed to increase the likelihood of sustainment of an evidence-based program or practice after initial implementation

[Designing for Dissemination and Sustainability to Promote Equitable Impacts on Health](#)

Bethany M. Kwan, Ross C. Brownson, Russell E. Glasgow, Elaine H. Morrato, Douglas A. Luke, Annual Review of Public Health 2022 43:1, 331-353

Designing for *Equity*

Yousefi Nooraie, R., Kwan, B., Cohn, E., AuYoung, M., Clarke Roberts, M., Adsul, P., & Shelton, R. (2020). Advancing health equity through CTSA programs: Opportunities for interaction between health equity, dissemination and implementation, and translational science. *Journal of Clinical and Translational Science*, 4(3), 168-175. doi:10.1017/cts.2020.10

Innovations: The Products of Research

Evidence

- The generalizable knowledge resulting from the conduct of research and evaluation

Programs, Treatments, Interventions, and Services

- Health promotion and/or disease prevention or educational programs, interventions, initiatives, treatments, or services

Technology and Infrastructure

- Devices, software, hardware, web-based and other tools and equipment for disease prevention or management, research, evaluation, or educational purposes

Dissemination and Implementation Strategies

- Methods, approaches, guides, or materials, for dissemination, implementation, and sustainment of effective, equitable, and efficient public health and health care practices in real world settings

Policy and Guidelines

- Local and/or national public health and health care guidelines, standards, and policies emerging from the evidence base

Methods

- Research and evaluation techniques, instruments, tools, models, measures and/or equipment

What is being designed for dissemination, sustainability, and equity?

Principles of D4DS

Beginning with the end in mind

Ensuring innovation-context fit

Planning for active
dissemination and sustainment

Fit to Context Framework

Four-phase process framework

Considers design of a research product and dissemination and sustainability plans from the perspective of ensuring fit to context

Products being designed are:

Culturally appropriate

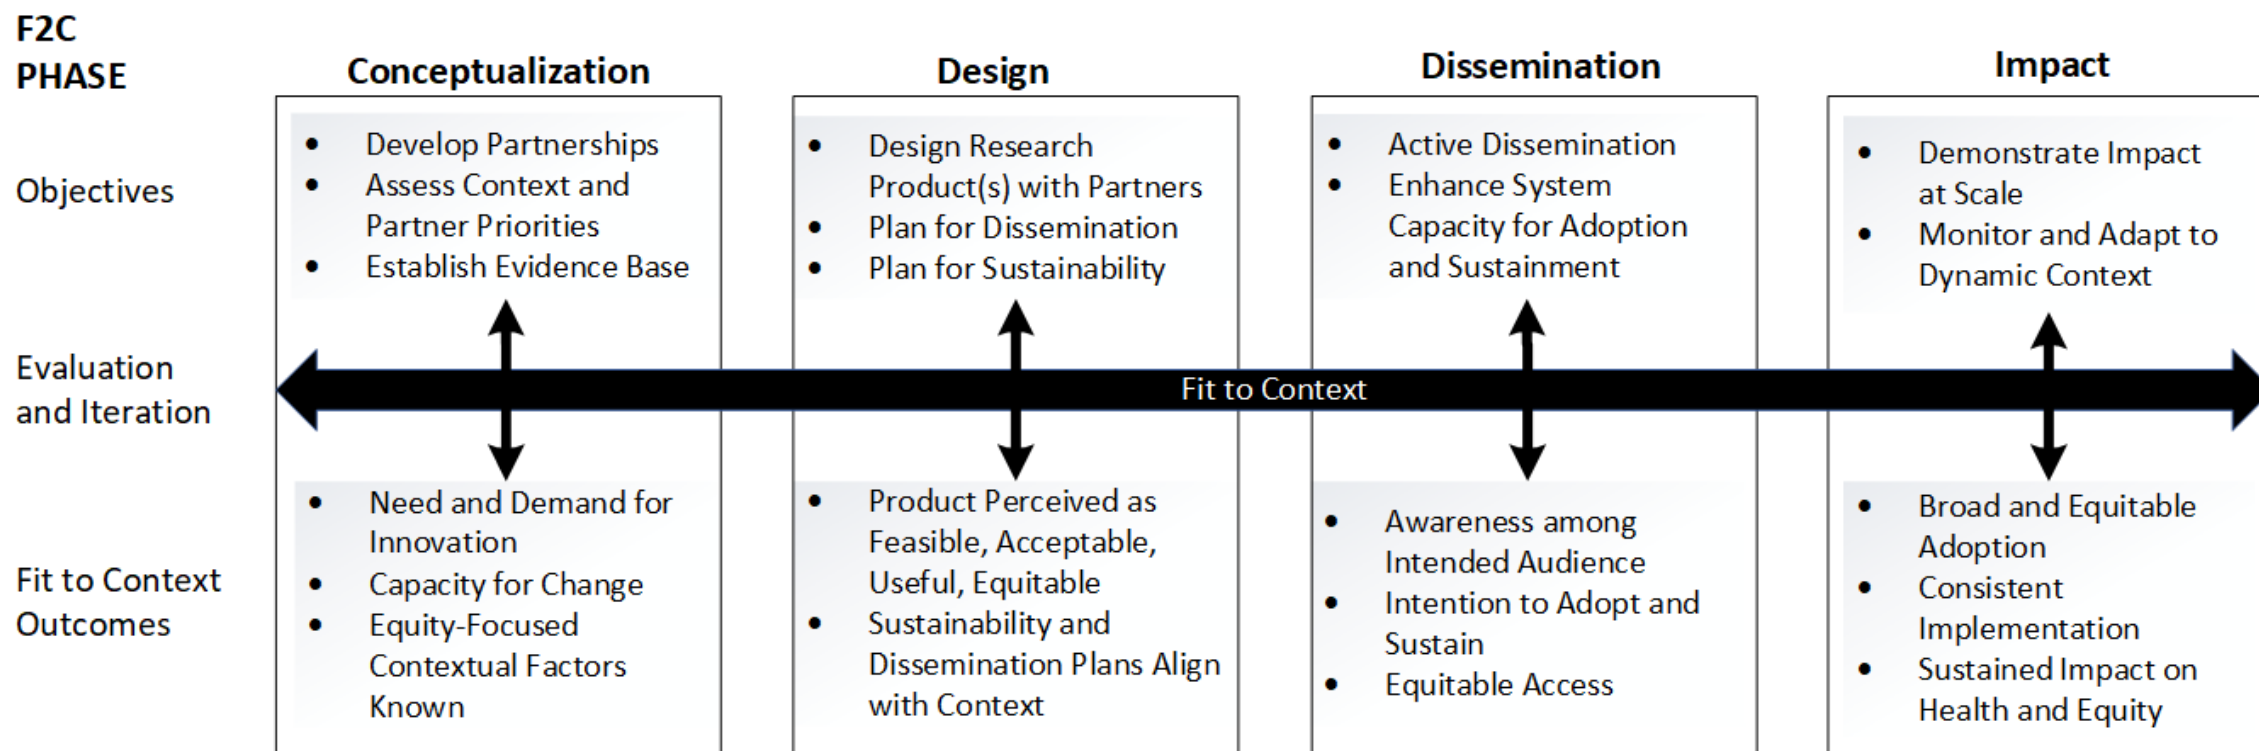

Feasible for use in resource-limited settings

Align with the strengths and assets of the intended audience and setting

Impact outcomes that matter to communities and partners

Kwan BM, Luke DA, Adsul P, Koorts H, Morrato EH, Glasgow RE. Designing for Dissemination and Sustainability: Principles, Methods, and Frameworks for Ensuring Fit to Context. In: Dissemination and Implementation Research in Health: Translating Science to Practice, 3rd ed. *Forthcoming*.

Fit to Context (F2C) Framework for Designing for Dissemination

F2C Conceptualization Phase

F2C PHASE QUESTIONS AND OUTCOMES

KEY QUESTIONS TO BE ANSWERED AND
OUTCOMES TO BE ASSESSED

F2C PHASE OBJECTIVES

ACTIONS TO BE TAKEN BY THE RESEARCH
TEAM AND PARTNERS

F2C PHASE EXEMPLAR METHODS

RESEARCH METHODS PARTICULARLY
RELEVANT TO CO-DESIGN RESEARCH
PRODUCTS AND EVALUATE AND ITERATE
“FIT TO CONTEXT” OUTCOMES

F2C PHASE RESEARCH APPROACH

RESEARCH APPROACHES
PARTICULARLY RELEVANT

F2C Conceptualization Phase

Based on evidence and partner input, to what extent is there a **need, demand, and capacity** for a new approach, product, or change in practice or policy in the context for intended use? To what extent are **contextual factors** relevant to equitable impact known?

Develop partnerships to address a priority health problem with an established evidence base.

Assess the context (the characteristics of the recipients, the delivery setting, systems of communication and influence, and implementation and sustainability infrastructure) for which an innovative and equity-focused research product will be used.

- Literature review
- Community-based participatory research
- Partner + community engagement
- Customer discovery
- Situation/SWOT analysis
- Process evaluation
- Context analysis
- Determinants analysis
- Systems mapping and modeling
- Social network analysis
- Market research
- Logic models
- Needs assessment

- Partnership development
- Partner engagement in research conceptualization and planning
- Formative research
- Baseline evaluation
- Developmental/ exploratory research

F2C Design Phase

F2C PHASE QUESTIONS AND OUTCOMES KEY QUESTIONS TO BE ANSWERED AND OUTCOMES TO BE ASSESSED	F2C PHASE OBJECTIVES ACTIONS TO BE TAKEN BY THE RESEARCH TEAM AND PARTNERS	F2C PHASE EXEMPLAR METHODS RESEARCH METHODS PARTICULARLY RELEVANT TO CO-DESIGN RESEARCH PRODUCTS AND EVALUATE AND ITERATE “FIT TO CONTEXT” OUTCOMES	F2C PHASE RESEARCH APPROACH RESEARCH APPROACHES PARTICULARLY RELEVANT
F2C Design Phase			
<i>To what extent is the new approach, device, or change in practice or policy perceived as feasible, acceptable, useful, effective, and equitable by the intended audience in the intended setting? How well do plans for active dissemination and sustainability align with context?</i>	<p>Co-design research products(s) with partners that meet the needs, demand, and capacity for change established in the conceptualization phase.</p> <p>Create plans for active dissemination that align with the messaging, packaging, and distribution channels best suited for the intended audience and setting.</p> <p>Determine a viable strategy for sustainability of the research product(s) in real-world contexts for intended use.</p>	<ul style="list-style-type: none"> • Human & user-centered design/user testing • Participatory methods and co-design • Value proposition design • Market viability analysis • Business model generation • Intervention/implementation mapping • Optimization methods • Adaptation methods • Logic models • Rapid prototyping • Graphic design + other art forms 	<ul style="list-style-type: none"> • Developmental/ exploratory research • Pilot/feasibility studies • “Proof of concept” studies • Small scale pragmatic trials

F2C Dissemination Phase

F2C PHASE QUESTIONS AND OUTCOMES	F2C PHASE OBJECTIVES	F2C PHASE EXEMPLAR METHODS	F2C PHASE RESEARCH APPROACH
KEY QUESTIONS TO BE ANSWERED AND OUTCOMES TO BE ASSESSED	ACTIONS TO BE TAKEN BY THE RESEARCH TEAM AND PARTNERS	RESEARCH METHODS PARTICULARLY RELEVANT TO CO-DESIGN RESEARCH PRODUCTS AND EVALUATE AND ITERATE “FIT TO CONTEXT” OUTCOMES	RESEARCH APPROACHES PARTICULARLY RELEVANT
F2C Dissemination Phase			
<p><i>How well does the active, planned dissemination strategy work to create awareness and intention to adopt and sustain the product? To what extent does the system capacity for adoption and sustainment create equitable access?</i></p>	<p>Enact design phase plans for active dissemination of the research product(s) to intended audiences using appropriate distribution channels and leveraging known systems of communication and influence.</p> <p>Build and leverage system capacity for broad and equitable adoption and sustainment in the intended context.</p>	<ul style="list-style-type: none"> • Dissemination trial designs • Hybrid implementation/ effectiveness trials • Adaptation frameworks and methods • Logic models 	<ul style="list-style-type: none"> • Larger scale, pragmatic trials • Demonstration projects • Quality improvement • Program evaluation • Learning Health Systems research

F2C Impact Phase

F2C PHASE QUESTIONS AND OUTCOMES	F2C PHASE OBJECTIVES	F2C PHASE EXEMPLAR METHODS	F2C PHASE RESEARCH APPROACH

F2C Impact Phase			
<i>To what extent does the product demonstrate a sustained equitable impact on health and continued fit to context over time in real-world contexts?</i>	<p>Demonstrate equitable impact of research product(s) and active dissemination and sustainability plans at scale.</p> <p>Monitor and adapt research product(s), dissemination, and sustainment plans to ensure fit to dynamic context in real-world settings and populations.</p>	<ul style="list-style-type: none"> • Pragmatic trial designs • Real-world evidence/observational methods • Economic and cost analysis • Hybrid implementation/effectiveness trials • Policy analysis • Fidelity and adaptation methods • De-implementation methods 	<ul style="list-style-type: none"> • Larger scale, pragmatic trials • Demonstration projects • Quality improvement • Public health surveillance • Program evaluation • Learning Health Systems research

Designing for Dissemination and Scale-Up of Equitable Access to Treatment for COVID-19

Case Example

mAb Colorado Specific Aims

Dissemination, Implementation, and Real-World Effectiveness of Neutralizing Monoclonal Antibody Therapy for COVID-19

Using a type 2 hybrid implementation-effectiveness design:

- Aim 1: Assess barriers and facilitators to use of mAbs statewide, based on diffusion of innovations theory
- Aim 2: Develop, implement, and evaluate innovative strategies statewide to optimize equitable mAb access
- Aim 3: Determine the real-world effectiveness and safety of mAb treatment in high-risk COVID-19 outpatients

Goals

- Develop scalable infrastructure for real-time, implementation and real-world effectiveness data for mAb treatment
- Help policymakers, clinicians, and patients manage issues of uncertainty, risk, urgency, equity, and resource limitation
- Create a model for rapidly generating high quality real-world evidence in infectious disease pandemics and other future public health emergencies

Rapid Expert Consultation on Allocating COVID-19 Monoclonal Antibody Therapies and Other Novel Therapeutics (January 29, 2021) (2021)

DETAILS

34 pages | 8.5 x 11 | PDF

ISBN 978-0-309-27008-3 | DOI 10.17226/26063

Proposed factors related to low utilization of COVID-19 mAbs

- Lack of awareness, interest, confidence in therapies among patients and providers
- Lack of interest/ability/resources to travel to treatment sites
- Requirement to defer vaccination
- Lack of access to health care
- Out of pocket costs
- Seeking treatment too late

National Academies of Sciences, Engineering, and Medicine. 2021. *Rapid Expert Consultation on Allocating COVID-19 Monoclonal Antibody*

Barriers and Facilitators to Use of mAbs for COVID-19

- **Community awareness** of the need for timely testing and effective treatment available for all (not just the wealthy and connected)
- **Clinician education** about monoclonal antibody treatment for COVID-19 including strength of evidence, eligibility criteria, and how to access treatment
- Clear guidance on implementation and use of **referral processes**
- Addressing **inefficiencies in relying upon individual providers** to identify eligible patients, discuss treatment, find a treatment location, and complete a referral
- Assurances regarding **costs of care** especially for the **uninsured**

MONOCLONAL ANTIBODY TREATMENT TO PREVENT SEVERE COVID-19
GUIDE FOR HEALTH CARE PROVIDERS

1  **Is my patient eligible?**

Monoclonal antibody treatments are for outpatients with mild to moderate COVID-19 symptoms and who meet the eligibility criteria, including:

- Not hospitalized or on oxygen due to COVID-19
- High risk of developing severe disease and hospitalization
- Able to receive treatment within 10 days of developing symptoms

Patients who have been vaccinated may receive monoclonal antibody treatment.

2  **Is my patient interested?**

■ Counsel patient on monoclonal antibody treatment.

■ Patient must be provided with the 3-page **EUA Fact Sheet**.

- EUA Fact Sheet for Casirivimab and Imdevimab (Regeneron)
- EUA Fact Sheet for Bamlanivimab and Etesevimab (Eli Lilly)
- EUA Fact Sheet for Sotrovimab (GSK)

■ Find updated [information](#) on benefits and risks of treatment.

3  **Where can my patient receive an infusion?**

Options to find an infusion center with your patient:

- Choose an infusion center on the [CDPHE website](#) and complete the [online form](#), or
- Check [Colorado Infusion Center Map](#).

4  **How can I arrange treatment?**

The referral and ordering of monoclonal antibody treatment varies, depending on your clinic and/or health care system processes.

- If using the [online CDPHE form](#) to send a referral to the selected infusion center, you will give the patient the infusion center phone number to call and schedule a same- or next-day appointment.
- If using an infusion center associated with your organization, you may generate the referral and order within your EHR.
- Assist patient with transportation, if needed. Safest travel is having the person with COVID-19 sit as far from the driver as possible, mask on, windows open. Avoid public transportation if possible.

5  **Is there cost for infusion?**

- There is no cost for the medication; the federal government pays for the medication.
- The infusion facility fee is covered by Medicare, Medicaid, and commercial insurance. Patients may be billed co-pays and co-insurance. Self-pay patients may be charged a facility fee for the infusion.
- If patient is self-pay, ask if the infusion center will charge the patient for infusion. Patients without insurance who visit a federally-qualified health center for treatment, like Denver Health/Penn Urgent Care, would likely receive no bill.

For more information or to find an infusion center near you:
Call 1-877-332-6585 (English) or 1-877-366-0310 (Spanish),
or visit [combatcovid.hhs.gov](#).

mab-colorado

6/24/2021

Clinician Experience with Referral Systems and Processes

- **mAb referral process**
- **Step 1.** Assess eligibility
- **Step 2.** Discuss treatment with patient
- **Step 3.** Determine treatment location
- **Step 4.** Issue referral and order for treatment

Community Member Survey and Focus Group Insights

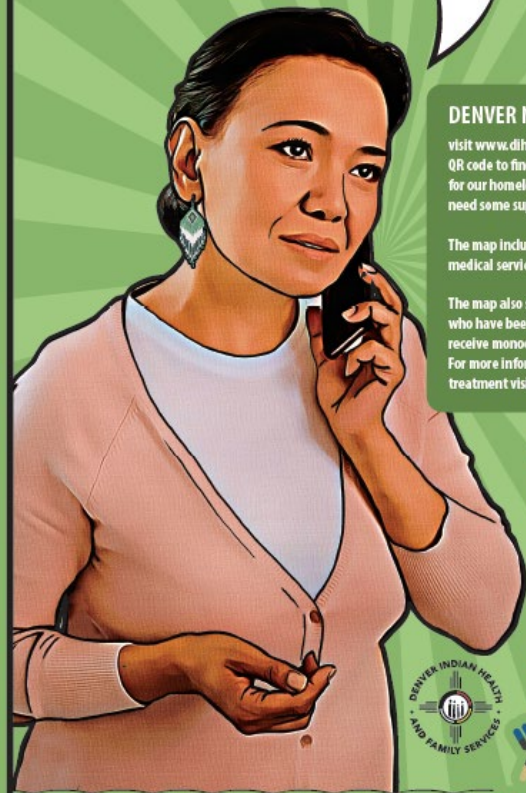

- Little baseline knowledge about monoclonal antibody treatment
 - Especially among Spanish-language participants
- Overall positive impression of monoclonal antibody treatment
- Key questions to be answered in information about mAb
 - Who can get it?
 - How can you get it?
 - How much does it cost?
 - What are the side effects?
- Priorities
 - Spread the Word-information about mAb should be shared across all available media
 - Make it easy-reduce barriers to obtaining mAb treatment when needed
 - Don't make it political-right now mAb treatment is not politicized, keep it that way
 - Equitable access

Kwan BM, Sobczak C, Gorman C, Roberts S, Owen V, Wynia MK, Ginde AA, Pena-Jackson G, Ziegler O, DeCamp LR. "All of the things to everyone everywhere": A mixed methods analysis of community perspectives on equitable access to monoclonal antibody treatment for COVID-19. medRxiv. 2022 Jan 1.

Health Equity Focus

- Equitable access to care
 - Rural areas
 - Racial and ethnic minorities
 - Hispanic/Latino
 - Spanish-speaking communities
 - Native American communities
- People who were:
 - Uninsured/underinsured
 - Undocumented
 - Unhoused

I've just been diagnosed with Covid-19, where can I get the Covid-19 Monoclonal Antibodies to help speed my recovery?

¿Dio positivo para COVID-19? Actua Rapido

Puede sentirse mejor mas rápido si recibe un tratamiento con anticuerpos. Puede ayudar a mantenerlo fuera del hospital. El tratamiento con anticuerpos funciona mejor si usted es tratado dentro de los primeros días después de haber dado positivo para COVID-19.

Para obtener mas información acerca del tratamiento de anticuerpos siga estos pasos:

- ➔ **Llame a un proveedor médico de inmediato**
 - Llame a su proveedor de atención primaria o de atención urgente.
 - Dígame cuándo tuvo los primeros síntomas de COVID-19.
 - Dígame si tiene algún otro problema de salud.
 - Pregúntele si pueden ayudarlo a obtener tratamiento con anticuerpos monoclonales.

- ➔ **Obtenga una referencia a una clínica**

Si el tratamiento con anticuerpos es adecuado para usted, el proveedor hará una referencia a una clínica cercana a usted donde usted puede obtener el tratamiento. Le darán la dirección y el número de teléfono de la clínica.

Muchos planes de salud pueden pagar el costo total del tratamiento

El tratamiento con anticuerpos funciona contra la variante delta COVID-19

How can I arrange treatment?

The referral and ordering of monoclonal antibody treatment varies, depending on your clinic and/or health care system processes.

- If using the [online CDPHE form](#) to send a referral to the selected infusion center, you will give the patient the infusion center phone number to call and schedule a same- or next-day appointment.
- If using an infusion center associated with your organization, you may generate the referral and order within your EHR.
- Assist patient with transportation, if needed. Safest travel is having the person with COVID-19 sit as far from the driver as possible, mask on, windows open. Avoid public transportation if possible.

5 

Is there cost for infusion?

- There is no cost for the medication; the federal government pays for the medication.
- The infusion facility fee is covered by Medicare, Medicaid, and commercial insurance. Patients may be billed co-pays and co-insurance. Self-pay patients may be charged a facility fee for the infusion.
- If patient is self-pay, ask if the infusion center will charge the patient for infusion. Patients without insurance who visit a federally-qualified health center for treatment, like Denver Health Pena Urgent Care, would likely receive no bill.

For more information or to find an infusion center near you:
Call 1-877-332-6585 (English) or 1-877-366-0310 (Spanish),

How to get monoclonal antibody therapy

UCHealth currently operates four infusion sites: University of Colorado Hospital in Aurora, Memorial Central Outpatient Infusion in Colorado Springs, Poudre Valley Hospital in Fort Collins, and Yampa Valley Medical Center in Steamboat Springs.

Please speak with your health care provider to determine if you are eligible for monoclonal antibody treatment and to discuss if it may be right for you.

Your provider will help you locate an infusion center and order the medication for you. You may also **set up a visit with UCHealth Virtual Urgent Care** who can help determine eligibility and order treatment.

Costs

Currently, the medication used for COVID-19 monoclonal antibody treatment is free of charge, but infusion service fees to administer the drug may apply. If you have insurance, these fees will be billed to your

Ask your doctor about
TREATMENTS FOR COVID-19

If you or a loved one test positive for COVID-19, treatments are available that can help prevent severe illness.

- ✓ Test early to see if you have COVID-19.
- ✓ Treatments are often only available if you take them within five days of when you first felt symptoms.

- ✓ Some treatments help reduce the risk of hospitalization from COVID-19 by 90%.

- ✓ Have questions about COVID-19 treatments? Visit covid19.colorado.gov/treatments or call 877-CO-VAX-CO.

- ✓ Treatments are available at nearly 600 locations across Colorado. Find the nearest location by scanning the QR below:

Advancing a D4DSE Approach: Recommendations

Adopt a D4DS mindset

Consider who will use your product, under what circumstances, and to address what urgent need – design studies to test your product IN and FOR THAT CONTEXT

Expect the need to pivot and adapt over time

Enhance skills and capacity in the team

Team science
Communication
Graphic design
Systems and engineering
Data science

Build and leverage systems and infrastructure for distribution and marketing

Practice-based research networks
Cooperative Extension Services
Public Health Agencies
Health System Communications

Incentivize dissemination beyond academic journals and conference presentations

Promotion criteria includes equity and impact
