

A postdoctoral position is available in the laboratory of Dr. Felix Yarovinsky at the University of Rochester Medical Center.

Our laboratory focuses on inflammatory bowel disease pathogenesis, microbiota, innate immunity and mucosal immunology. The NIH-funded position will focus on immune mechanisms that contribute to stem cell and Paneth cell responses to inflammatory cytokines.

We are looking for an outstanding scientist who is proactive, independent and motivated to use immunological, computational, and microbiological methods to solve complex biological problems.

With access to state-of-the-art technologies, the fellow will identify and characterize novel pathways that regulate intestinal inflammation. The applicant is expected to work independently as well as in collaboration with other group members with the goal to generate high-quality publications as well as develop novel therapeutic approaches to inflammatory bowel disease.

Qualifications

As a postdoc applicant, candidates should have a Ph.D., M.D. or M.D./Ph.D. degree granted within the past three years, with training in immunology, microbiology, or molecular biology.

To Apply

Interested candidates should send curriculum vitae, description of achievements and research interests, and names of two references to Felix Yarovinsky at

Felix_Yarovinsky@URMC.Rochester.edu

The University of Rochester is committed to fostering, cultivating and preserving a culture of diversity and inclusion. The University believes that a diverse workforce and inclusive workplace culture enhances the performance of our organization and our ability to fulfill our important missions. The University is committed to fostering and supporting a workplace culture inclusive of people regardless of their race, ethnicity, national origin, gender, sexual orientation, socio-economic status, marital status, age, physical abilities, political affiliation, religious beliefs or any other non-merit fact, so that all employees feel included, equal valued and supported.
