

A postdoctoral position available to work on chromosome editing and writing, and its potential clinical applications:

Dr. Bin Zhang's lab in the department of Pathology and Laboratory Medicine, University of Rochester, New York is looking for a highly motivated postdoctoral associate to work in the area of chromosome biology, particularly focusing on creation and correction of large chromosomal aberrations and its potential clinical applications. The candidate should hold a PhD degree and have a strong background in molecular biology and cell biology. Experience with cell culture, gene cloning, DNA/RNA detection/quantification, and protein expression/detection are required.

To apply, please send an email to Dr. Bin Zhang with a CV, names of three references, and a brief summary of previous research experience and future interests.
