

Post-doctoral Fellowships Available in Pulmonary Research

Lung Biology Program / Pulmonary Division
University of Rochester Medical Center, Rochester, NY

Post-doctoral fellowships are available beginning July 1, 2020 for qualified applicants interested in conducting research in pulmonary diseases and lung biology. The University of Rochester houses a dynamic group of more than 30 researchers studying different aspects of lung diseases in a multi-disciplinary manner, with an established track record of mentorship and career development. Candidates will be supported by the NIH/NHLBI T32 Training Grant “Multidisciplinary Training in Pulmonary Research” (T32 HL066988)

The postdoc candidate must be a **US citizen or permanent resident**, and must have received a PhD, MD, or MD/PhD by the time appointment begins. The NIH maximum allowable duration for support via training funds (T32+F32) is 3 years. Therefore, to be appointed, postdoc candidates may have received no more than 2 years of prior NIH postdoctoral support through these combined mechanisms. We encourage applications from under-represented minority candidates.

Currently recruiting Faculty and Projects include:

Gloria Pryhuber , M.D.:	Pulmonary consequences of pre-maturity
Michael O'Reilly , Ph.D.:	Developmental origins of cardiopulmonary disease
Steve N. Georas , M.D.:	Role of protein kinase D in anti-viral immunity
Arshad Rahman , Ph.D.:	Mechanistic targets in acute lung injury

Interested candidates should submit their C.V. and a letter of interest to:

Dr. Steve N. Georas, M.D. (Steve_Georas@urmc.rochester.edu) and

Dr. Michael O'Reilly (Michael_OReilly@URMC.Rochester.edu).
