

# DISASTER MEDICAL SURGE FOR HEALTHCARE PROVIDERS

This training will focus on managing the delivery of medical care in disasters, and how the medical model must adapt and flex when victim numbers overwhelm the capacity of first responders and the healthcare system. It is critical to be able to apply strategies that allow medical services to continue and maximize lives saved. Public Health's role in disasters will be discussed as well as the effect the COVID pandemic has had in changing the medical model in the United States. Principles of altered standards of care and managing alternate care sites are other topics in the training.

**This course is being offered virtually:**

**WHEN:** May 13th, 2026, 8:00 am to 12:00 pm EST

**WHERE:** Virtual Zoom training. Link to be sent after registration
