

Evacuation of Facilities in Disasters Systems – Facility Trainers
RTC-eFINDS-TTT BP5
HPP Deliverable #6

Background:

eFINDS is a tracking system/application on the Health Commerce System (HCS) that should be used by a healthcare facility in the event of an emergent, urgent or planned evacuation. The application captures minimal amounts of data and allows facilities to track the patient/resident movement to other facilities, facility types or temporary shelters.

Hospitals that need to build capacity or need to replace an eFINDS facility-based trainer who can no longer fulfill this responsibility should send a staff person to this training.

Purpose of Training:

It is critical that all facilities ensure an adequate number of staff trained in the use of the eFINDS system and equipment. Therefore, the goal of this training is to develop a cadre of eFINDS facility based trainers who can conduct eFINDS Facility Based Training.

Target Audience:

Staff person(s) who will be responsible for conducting eFINDS Facility-Based Training.
