Retreat Feedback - Values

Values

Collaboration: 30
Meliora: 20
Community: 15
Efficiency: 10
Equity: 5
Education: 2
I-CARE and other values: 15
Population Health Objectives
Population health science is the study of the impact of interventions on health outcomes, quality and cost that address a community's specific needs.
Objectives

1. Enhance methods to measure and demonstrate improvements in population health
2. Increase capacity to make use of population health data
3. Increase capacity to conduct community-engaged population health research
4. Increase early-career training opportunities in population health and population research
