Choosing and Using Medicines Safely

Core Concepts:

- The Drug Facts label on an over-the-counter drug provides directions for safe use including: how much, how often, and for how long.
- The Drug Facts label on an over-the-counter drug provides warnings about people who should not use the medicine until they talk to a doctor.

Class time required:
2 forty-minute class period

Teacher Provides:

For each student
- Copy of student handout entitled Choosing and Using Medicines Safely

For each pair of students:
- Medicine Labels for 7 over-the-counter products, printed in color. Laminate if these will be used by multiple classes. See pages vi through xii. Optional: Make the labels look more realistic by cutting along the dotted lines to remove the white space from around the labels.
- Copy of How to Read an Over-the-Counter Drug Facts Label. See page xiii.

Teacher Resources:

- Over-the-Counter Medicine Safety by Scholastic provides four lessons, classroom posters, role-playing culminating activity, whiteboard images, a digital flipbook, medicine safety videos, additional resources, and a pre/post-quiz for over-the-counter medicine use.
  http://www.scholastic.com/otcliteracy/

- Medicines in My Home is a multimedia educational program to teach consumers how to choose over-the-counter medicines and use them safely. “Rooms” of the program contain presentations, print materials, and resources can be used online or downloaded.
  http://www.fda.gov/Drugs/ResourcesForYou/Consumers/BuyingUsingMedicineSafely/UnderstandingOver-the-CounterMedicines/ucm092139.htm

- Medicines in My Home: The Over-the-Counter Drug Facts Label is a video (approximately 2 minutes) on how to interpret Drug Facts labels.
  https://www.youtube.com/watch?v=hT6Th_QfQKE
• **Understanding Over-the-Counter Medicine** provides a variety of resources including brochures, articles, fact sheets, checklists, print public service announcements, Internet public service announcement banners, audio public service announcements, and television public service announcements.
  http://www.fda.gov/Drugs/ResourcesForYou/Consumers/BuyingUsingMedicineSafely/UnderstandingOver-the-CounterMedicines/default.htm

• **Checklist for Choosing Over-the-Counter (OTC) Medicine for Adults** provides a checklist that helps people choose an appropriate over-the-counter medicine.
Suggested Class Procedure:

1. Distribute a copy of Choosing and Using Medicines Safely student instructions to each student.
2. Assign students to work in pairs.
3. Distribute a copy of How to Read an Over-the-Counter Drug Facts Label to each pair of students.
4. Distribute copies of the seven over-the-counter medicine labels to each pair of students.
5. Explain that students should work with their partner to select the medicine that each family member might take for their symptoms.
6. The vocabulary in this activity is “real world” language that students will encounter when they read labels. It is important to tell students to ask what words mean if they do not understand them. In a real world situation, they should ask the pharmacist about the meaning of words. In the classroom, you may play the role of pharmacist. Optional: Students could work as a class to make a glossary for Drug Facts label vocabulary words that people may find difficult to understand.
7. Consider playing the role of a pharmacist to model how to do the activity. Use Bill Lee as an example.
8. Call on students to play the role of “pharmacists” by explaining their answers to one of the first cases (Bill Lee through Kathy Lee).
9. Ask students to share their answers to the Andrea Lee and Rick Lee cases. It is important that you make time to discuss these cases during class to be certain that students understand the appropriate actions.
10. Optional: The multiple choice questions on pages iv-v may be used for homework or as a quiz.

Warning: It is essential that you maintain families’ legal rights to privacy related to health and medicine use. Do not allow students to provide or discuss examples of medicines or dietary supplements used by their family.

Note: The everyday use of the words “drugs”, “medicines”, and “dietary supplements” is different from the definitions used by the FDA (Food and Drug Administration). The Fact Sheet uses the FDA language. However, to help students relate the activity to their lives, we have used the words “drug” and “medicine” interchangeably.

Alternative Procedure:

- Distribute a copy of Choosing and Using Medicines Safely student instructions and a copy of How to Read an Over-the-Counter Drug Facts Label to each student.
- Split class up into 7 “pharmacist teams”. Each team will research one case. Assign one of the 7 cases (Bill Lee through Kathy Lee) to each team.
- Distribute a set of the seven labels to each team.
- Students work with their team to answer the case assigned to them.
- Pharmacist teams roll play to report their answers to the class.

Note: Do not assign the Andrea Lee and Rick Lee cases to students. Instead, use these two cases during whole class discussions.
Multiple Choice Questions: *Choosing and Using Medicines Safely*

*Base your answers to the questions on the information in the Medicine Label provided.*

1. What type of health care product is shown on the label?  
   A. Dietary supplement  
   B. Prescription medicine  
   C. Over-the-counter medicine

2. An antihistamine is most likely used to reduce  
   A. pain  
   B. a high temperature  
   C. allergy symptoms

3. What part of the label describes how much of the product to use?  
   A. Part 4  
   B. Part 5  
   C. Part 6

4. What part of the label describes how often to use this product?  
   A. Part 4  
   B. Part 5  
   C. Part 6

5. Possible side effects from taking this medicine may include  
   A. drowsiness or excitability  
   B. hay fever or allergy  
   C. emphysema or chronic bronchitis

6. For safe use by a five year old child,  
   A. Use 1 tablet every 12 hours  
   B. Avoid an overdose by taking ½ tablet every 4 hours  
   C. Ask a doctor for advice.

7. An overdose would occur if an 11 year old girl took more than _____ tablets in a 24 hour period.  
   A. 6  
   B. 12  
   C. 18

8. What is the maximum safe amount of the active ingredient in this product that a 13 year old girl could take in a 24 hour period? Express your answer in milligrams.  
   A. 2 milligrams  
   B. 12 milligrams  
   C. 24 milligrams

9. What side effect would most likely result if this product is taken with alcohol or sedatives?  
   A. Drowsiness  
   B. Excitability  
   C. Glaucoma

10. If a child or adult accidentally takes an overdose of this product,  
    A. Contact a Poison Control Center immediately for advice.  
    B. Seek medical help after overdose symptoms appear.  
    C. Reduce the amount the person takes for several days.
Refer to this label when answering the multiple choice questions.

Drug Facts

Active Ingredients (in each caplet)
Acetaminophen 500 mg

Purpose
Pain reliever/fever reducer

Uses: temporarily relieves minor aches and pains due to:
- headaches
- muscle aches
- backache
- arthritis
- menstrual cramps
- toothache
- the common cold

Warnings

Alcohol warning: If you consume 3 or more alcoholic beverages every day, ask your doctor whether you should take acetaminophen or other pain relievers/fever reducers. Acetaminophen may cause liver damage.

Do not use with any other products containing acetaminophen

Stop use and ask your doctor if
- new symptoms occur
- redness or swelling is present
- pain gets worse or lasts for more than 10 days
- fever gets worse or lasts for more than three days
- if pregnant or breast-feeding, ask a health professional before use

Keep out of reach of children

Adult Extra Strength
Pain Reliever and Fever Reducer
Contains Acetaminophen

100 CAPLETS—500 mg each

Overdose warning: Taking more than the recommended dose (overdose) could cause serious health problems. In case of overdose, get medical help or contact a Poison Control Center right away. Quick medical attention is critical for adults as well as for children even if you do not notice any signs or symptoms.

Directions.
- do not take more than directed (see overdose warning)
- take 2 caplets every 4 to 6 hours as needed
- do not take more than 8 caplets in 24 hours

Children under 12 years: do not use this adult Extra Strength product in children under 12 years of age; this will provide more than the recommended dose (overdose) of acetaminophen and could cause serious health problems.

Other Information
- do not use if neck wrap or foil inner seal is broken or missing
- store at room temperature

Drug Facts

Active Ingredient (in each gelcap) Purpose
Diphenhydramine HCL 25 mg ........... antihistamine

Uses: temporarily relieves these symptoms due to hay fever or other upper respiratory allergies:
• sneezing
• itchy nose or throat
• itchy, watery eyes
• runny nose

Warnings
Do not use
• to make a child sleepy
• with any prescription or nonprescription drug containing diphyhydramine, even one used on the skin
Ask a doctor before use if you have:
• liver disease
• glaucoma
• trouble urinating due to enlarged prostate gland
• a breathing problem or chronic cough that lasts or occurs with smoking, asthma, chronic bronchitis, or emphysema

Ask a doctor or pharmacist before use if you are taking sedatives or tranquilizers

If pregnant or breast-feeding, ask a health professional before use.

When using this product:
• marked drowsiness may occur
• avoid alcoholic drinks
• alcohol and sedatives may increase drowsiness
• be careful when driving a motor vehicle or operating machinery
• excitability may occur, especially in children

Keep out of reach of children
In case of overdose, get medical help or contact a Poison Control Center right away. Quick medical attention is critical for adults as well as for children even if you do not notice any signs or symptoms.

Directions
• If needed, repeat dose every 4-6 hours
• do not take more than 6 times in any 24 hour period

<table>
<thead>

Drug Facts

Active Ingredient
(in each 15 ml Tablespoon)
Bismuth subsalicylate 250 mg

Purpose
upset stomach reliever
antidiarrheal

Uses: relieves:
- travelers' diarrhea
- diarrhea
- upset stomach due to overeating including belching, heartburn, gas
- nausea

Warnings
Reye's syndrome: Children and teenagers who have or are recovering from chicken pox or flu-like symptoms should not use this product. When using this product, if changes in behavior with nausea and vomiting occur, consult a doctor because these symptoms could be an early sign of Reye's syndrome, a rare but serious illness.

Allergy Alert: Contains salicylate. Do not take if you:
- are allergic to salicylates (including aspirin)
- are taking other salicylates (including aspirin)
- with any prescription or nonprescription drug containing diphhydramine, even one used on the skin

Do not use if you have
- an ulcer
- a bleeding problem
- bloody or black stools

Ask a doctor before use if you have
- fever
- mucus in the stool

Ask a doctor or pharmacist before use if you are taking any drug for:
- anticoagulation (thinning the blood)
- diabetes
- gout
- arthritis

If pregnant or breast-feeding, ask a health professional before use.

When using this product:
a temporary, but harmless, darkening of the stool and/or tongue may occur.

Stop use and see a doctor if:
- diarrhea lasts for more than 2 days
- symptoms get worse
- ringing in the ears or loss of hearing occurs

Keep out of reach of children
In case of overdose, get medical help or contact a Poison Control Center right away. Quick medical attention is critical even if you

Directions:
- shake well before use
- for accurate dosing, use dosing cup
- adults and children over 12 years—1 dose (2 TBSP or 30 ml) every 1/2 to 1 hour as needed;
- do not exceed 8 doses (16 TBSP or 240 ml) in 24 hours
- use until diarrhea stops but not for more than 2 days
- children under 12: ask a doctor
- drink plenty of clear liquids to prevent dehydration caused by vomiting and diarrhea

Other Information:
each TBSP contains:
sodium 6 mg, salicylate 118 mg, protect from freezing, protect from excessive heat (over 1040 F or 40 C), low sodium, sugar free,

TAMPER EVIDENT: Do not use if neck wrap or foil inner seal is broken or missing
- store at room temperature

Inactive ingredients: benzoic acid, flavor, magnesium aluminum sulphate, saccharin sodium, salicylic acid, sorbic acid, sucralose, water

**Drug Facts**

**Uses:** temporarily reduces fever and temporarily relieves minor aches and pains due to the common cold, flu

**Warnings**

Liver warning: This product contains acetaminophen. Severe liver damage may occur if your child takes:

• with other drugs containing acetaminophen
• more than 5 doses in 24 hours, which is the maximum daily amount.

Sore throat warning: If sore throat is severe, persists for more than 2 days, is accompanied or followed by fever, headache, rash, nausea, or vomiting, consult a doctor promptly.

Do not use • with any other drug containing acetaminophen (prescription or non-prescription). If you are not sure whether a drug contains acetaminophen, ask a doctor or pharmacist.

Ask a doctor before use if your child has liver disease or is taking the blood thinning drug warfarin.

When using this product do not exceed the recommended dose (see overdose warning)

• anticoagulation (thinning the blood)
• diabetes
• gout
• arthritis

Stop use and ask a doctor if:

• new symptoms occur
• redness or swelling is present
• pain gets worse or lasts more than five days
• fever gets worse or lasts more than 3 days. These could be signs of a serious condition.

Keep this and all drugs out of reach of children.

Overdose Warning: Taking more than the recommended dose (overdose) may cause liver damage. In case of accidental overdose, see professional assistance or contact a Poison Control Center immediately. Quick medical attention is critical even if you do not notice any signs or symptoms.

Choosing and Using Medicines Safely

Members of the Lee family have a variety of health problems. There are many over-the-counter (OTC) medicines that the family members could use. Over-the-counter (OTC) medicines are legal drugs that can be purchased without a prescription from a doctor. However, when people use OTC medicines, they need to be careful to read and follow the instructions on the medicine label to be certain that they use them safely.

You will help members of the Lee family select appropriate over-the-counter medicines. For each family member, you will:

- Read the description of the family member’s symptoms.

- Read the active ingredients, purpose, and uses sections of the Drug Facts label on the medicines. Select one of the medicines that could be used to treat the person’s symptoms. Record the name of the medicine that you selected.

- Read the directions on the Drug Facts label. Record the recommended dose and information on how often the person should take that dose.

- Read the warnings, other information, and inactive ingredients sections on the Drug Facts label. Make notes to explain precautions the person should take to avoid harmful effects from this medicine.

Refer to the handout, How to Read an Over-the-Counter Drug Facts Label, to help you understand how to find important information on a medicine.
Bill Lee
Age: 40 years

Bill is a long-distance truck driver. He has allergy symptoms (watery eyes, runny nose, and sneezing) that started when the family adopted a dog. Bill has no other health problems.

1. Which medicine could be used to treat allergy symptoms? ___Dry-All Allergy Relief_____
   - What is the correct dose? ___2 gel caps_____
   - How often should this medicine be taken? ___every 4-6 hours_____
   - Take no more than ___6 times or 12 gel caps____ in a 24 hour period.

2. Is it safe for Bill to use this medicine without consulting his doctor? Explain why or why not.
   Yes, because he has no other health problems. He might ask his doctor how long it is safe to take this medicine.

3. List all of the precautions Bill should take to avoid harmful effects from this medicine.
   He should understand that the medicine causes drowsiness and be careful when driving. He should also avoid alcoholic drinks.

Mimi Lee
Age: 39 years

Mimi thinks that she has food poisoning from eating some leftover tacos that she found in the back of the refrigerator. She has both vomiting and diarrhea. She needs to be careful about what medicines she takes because she is pregnant.

1. Which medicine could be used to treat vomiting and diarrhea? ______Quell_______________
   - What is the correct dose? ___30 ___ml or ___2 ___TBSP (tablespoons)_____
   - How often should this medicine be taken? ___every ½-1 hour as needed__
   - Take no more than ___8 doses or 16 TBSP or 240 ml_____ in a 24 hour period.

2. When should someone stop use of this medicine and see a doctor? ___If diarrhea lasts for more than two days, if symptoms get worse, or if ringing in the ears or hearing loss occurs.

3. Is it safe for Mimi to use this medicine without consulting her doctor? Explain why or why not.
   No, because she is pregnant, she should contact her doctor before taking this medicine.
George Lee  
Age: 38 years  

Uncle George frequently gets really bad head and jaw aches.  

1. Which medicine could be used to treat head and jaw aches? _Extra Strength Pain Reliever and Fever Reducer________  
   - What is the active ingredient in this medicine? ___acetaminophen________  
   - What is the correct dose for this medicine? ___2 caplets________  

2. Because Uncle George is a large man, he thinks it is OK to take two doses of this medicine every 4 hours. Explain how taking too much of this medicine may harm his body. Be specific.  

   An overdose of acetaminophen may cause liver damage.  

3. George often drinks more than three beers a day. Explain why it might be dangerous for him to take this medicine.  

   Combining alcohol and acetaminophen may cause liver damage.  

Doug Smith  
Age: 70 years  

Grandpa Doug thinks he has the flu. He has a fever (101 °F or 39 °C), chills, fatigue, muscle aches, headache, cough and stuffy nose. He has arthritis and takes daily doses of a prescription medication that contains acetaminophen. He also has glaucoma, an eye disease that gradually results in blindness.  

1. Which medicine could be used to treat flu symptoms? _____Adult Cold + Flu Formula________  
   - What is the correct dose? ___2 capsules________  
   - How often should this medicine be taken? ___every 6 hours________  
   - Take no more than ___8 capsules______ in a 24 hour period  

2. Is it safe for Doug to use this medicine without consulting his doctor? Explain why or why not.  

   No, because he takes another medicine that contains acetaminophen and he has glaucoma.
Grace Smith
Age: 69 years

Grandma Grace has a runny nose and sinus congestion. She takes a prescription antidepressant. She takes three dietary supplements each day (Ginkgo biloba, Saint John’s wort and Vitamin C).

1. Which medicine could be used to treat a runny nose and sinus congestion? ___Nasofed PE____
   • What is the correct dose? ___1 tablet____
   • How often should this medicine be taken? ___twice daily____
   • Take no more than ___2 tablets___ in a 24 hour period

2. Is it safe for Grace to use this medicine without consulting her doctor? Explain why or why not.
   
   No, because she takes an antidepressant that may contain an MAOI inhibitor.

3. List all of the medications and supplements Grace should tell her doctor that she takes.
   
   Antidepressant, Ginkgo biloba, Saint John’s wort, and Vitamin C

Laura Lee
Age: 12 years

Laura has problems with stomach pain, heartburn, bloating, and burping. Eating things such as pizza and spicy foods makes her symptoms worse.

1. Which medicine could be used to treat acid indigestion? ___Bantec 150____
   • What is the correct dose? ___1 tablet 30-60 minutes before meals____
   • How often should this medicine be taken? ___up to twice daily____
   • Take no more than ___2_____ tablets in a 24 hour period

2. When should someone stop taking this medicine? ___if heartburn continues or after 14 days___

3. Is it safe for Laura to use this medicine without talking with her parents or consulting her doctor? Explain why or why not.
   
   No, because she has stomach pain and the medicine says you should ask your doctor if you have stomach pain.
Kathy Lee
Age: 15 months

Kathy is crying because she is teething. Her jaw hurts and she has an ear ache. During the day her temperature is normal, but at bedtime she develops a slight fever (99.5°F or 37.5°C).

1. Which medicine could be used to treat children’s pain and fever? __Children’s Dye Free Acetaminophen Oral Suspension__

2. Kathy is 15 months old. Is it safe for someone to give Kathy this medicine without consulting a doctor? Explain why or why not.

   No, she is less than 2 years old.

3. The Drug Facts label says, “Use only enclosed dosing cup designed for this medicine.” Explain why you should not use a teaspoon from the kitchen for measuring the medicine.

   A teaspoon may not be accurate and it is important to measure the correct dose.
Andrea Lee  
Age: 18 years

Andrea is shopping at the mall when she develops a bad headache. One of her friends offers her some pain reliever pills that she had in her wallet.

1. List two reasons why Andrea should not take over-the-counter medicines offered by friends.
   - It is never safe to take medicine offered by a friend because you cannot be sure of what the medicine is.
   - You may have health conditions that make it dangerous to take the medicine.

2. What should Andrea do if her headache does not get better?
   Andrea could call her parents or talk to a pharmacist about what headache medicine she could purchase.

Rick Lee  
Age: 19 years

Rick has a horrible headache and fever. Rick has diabetes and he takes insulin. He also has allergies and takes allergy medicine. He tried to call his mother to find out what medicine he should take, but his calls kept going to voicemail.

1. Rick took Extra Strength Pain Reliever but he is still feeling worse. Make a list of three ways that Rick could get reliable health advice.
   - Call his doctor
   - Talk to a pharmacist
   - Go to the emergency room
   - Go to a community health clinic
   - Talk to a trusted adult family member or friend

2. When Rick talks with a health professional, make a list of three things that Rick should be sure to tell them?
   - His symptoms—headache and fever
   - Medicines that he is taking—insulin and allergy medicine
   - Medical conditions or health problems—diabetes and allergies

The TeensHealth from Nemours website provides information on how to communicate with a doctor.
