

# Exploring how older patients with advanced hematologic malignancies utilize their social network

## Theme #1

### Variation in Social Network Size

Social networks range from 7 to 18 contacts

## Theme #2

### Lack of Patient-Oncologist Communication

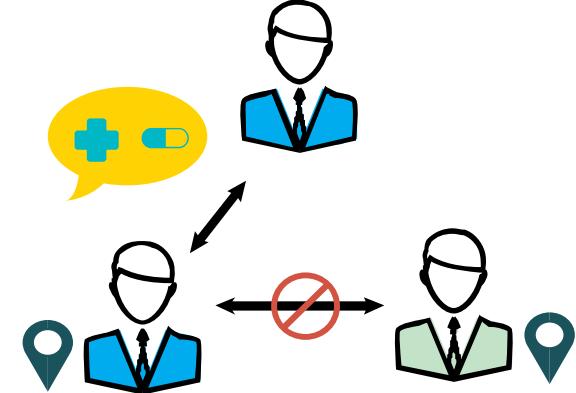

(Patients provide vague descriptions of diagnoses & unaware of approximate survival)

Reliance on contacts with medical background and/or cancer survivors

## Theme #3

### Selective Sharing/Receiving of Disease-Related Information

Withholding information from distant and busy contacts
