How common is dialysis regret and which factors are associated with it?

**Methods and cohort**
- Cleveland, OH
- 7 dialysis units
- Maintenance dialysis
- Completed 41-item questionnaire
  - n = 397

**Adjusted for:**
- Attitudes toward medical decision-making and care
- Attitudes towards future care
- Modifiable care process

**Outcomes**
- 82/397 (21%) reported decisional regret

**Conclusions**
Dialysis regret was common in this sample. Demographic factors (age, gender, marital status, race or educational attainment) were not significantly associated with regret, but modifiable care processes were.
