01: When user clicks on play button, the video is signed.

*The user can scale the video window, change its background color or opt to have no sign video

Video can be replayed by clicking on the button next to the text.

progress bar : graphically indicates percentage of survey completed

Users can select different signers depending upon their communication preference

02: After the video is complete, the question text appears, followed by the answers.

*The user can scale the text size, can display the text immediately by clicking on it, and select the answer by click on it.

The Health Behavior Survey-Sign Language Version (HBS-SLV) is an interactive computer based version of the Health Behavior Survey (HBS). The HBS-SLV is administered through the use of a flexible computerized user interface developed for the NCHDR through a collaboration between the Rochester Institute of Technology and the University of Rochester.

The user interface permits a survey participant to self-administer the HBS optionally in ASL, in English-based sign language, or in modified English text only, to select preferred sign models, and to choose the most comfortable background color and viewing size of video
