

Study of Cognitive Function during Chemotherapy in Cancer Patients

RSRB-University of Rochester-Approval
RSRB No. 31416
Expires June 16, 2015
- mac 5/29/14 -

Are you having difficulty with your cognitive functioning (such as problems remembering things, multi-tasking, or concentrating) since your diagnosis with cancer or your cancer treatments?

We are conducting a six-week study looking at the effects of an exercise intervention tailored for cancer patients and an over-the-counter anti-inflammatory (ibuprofen) for alleviating cognitive difficulties during cancer treatments.

To be eligible for this study, you must have noticed worsening in your cognitive functioning abilities since your cancer diagnosis or since you began treatment. Please contact Alex Skwirz, MS of the Cancer Control Unit at 585-276-7142 or by email at alex_skwirz@urmc.rochester.edu for more information about this research study.
