Pride in PM&R Rehab Outcomes: 2014

Programs we offer!
The Acute Rehabilitation Unit at the University of Rochester Medical Center offers specialty programs in treating children and adults with Spinal Cord Injury and Stroke as well as a variety of other impairments.

Our patients show significant gains during their rehabilitation stay!!
The quality of our program is demonstrated by the positive progress patients make in their function during their rehabilitation stay. Functional gain is measured using the Functional Independence Measure. We will help you to achieve the highest level of function possible.

Patients are discharged home!
The goal of our Rehab program is to help patients achieve the highest level of independence possible and assist them in returning home safely. Our efforts in this area are to continuously encourage patients to improve their function to reach their potential for independence. Early communication about discharge needs is the key element to accomplish this goal.

Above all… our patients are satisfied with their rehabilitation outcomes!!
The rehabilitation program takes great pride in the overall satisfaction patients report about their experience. Every patient discharged from the rehabilitation unit is contacted after discharge and surveyed about their stay, their satisfaction with the progress they made, and whether they have maintained the gains achieved in Rehab. We are committed to see you succeed with your rehabilitation.

Our Rehab unit is accessible to address many types of rehabilitation needs:
The decision to admit a patient to the Acute Rehabilitation Unit is based on a variety of factors: medical stability, the patients’ ability to participate and tolerate 3 hours of therapy per day, and a shared commitment to improve function and quality of life.
