About our Pediatric Physical Therapy Program.

UR Medicine Physical Medicine and Rehabilitation (PM&R) physical therapy for children involves a comprehensive evaluation and assessment, followed by treatments designed to address your child’s area(s) of need and developmental level. Our Pediatric Physical Therapy Program helps infants through teenagers improve their functional deficits. Our therapists will guide your child through individualized exercise programs that are developmentally appropriate to reach their therapy goals.

We treat children with conditions ranging from acute injuries to long-term illnesses and disabilities. Consulting with physicians, parents and caregivers, we develop an individualized treatment plan that works to reach each child’s maximum potential, step by step.

Evaluation and conditions we treat
These vary widely, and every treatment program is personalized for each child based on age and developmental level. Conditions we frequently treat include:

- Amplified Pain Syndrome
- Brain injuries
- Gross motor and developmental delay
- Muscle strains
- Neurological disorders
- Orthopaedic injuries
- Post-surgical rehabilitation
- Pre-surgical assessment
- Scoliosis
- Spinal cord injuries
- Toe Walking
- Torticollis

Treatment program
- Comprehensive evaluation and assessment
- Treatments designed to address your child’s specific area of need, as well as his or her developmental level
- Individualized exercise programs designed to achieve patient-specific goals in a developmentally appropriate manner
- Patient and family education programs
- Collaboration and communication with your child’s physician
