

**Effective December 16<sup>th</sup>, 2015**

## **Change in Cystic Fibrosis Carrier Screening Panel**

To: Clients of UR Medicine Labs

From: Robert A. Mooney, PhD  
Professor, Department of Pathology & Laboratory Medicine  
Phone: (585) 275-7811 email: robert\_mooney@urmc.rochester.edu

Date: December 14, 2015

---

As of December 16<sup>th</sup>, UR Medicine Labs will no longer offer the *Cystic Fibrosis Mutation Panel* through the Baylor Genetics Laboratories (CYFIR) for carrier screening. This test has been discontinued.

UR Medicine Labs will now replace this panel with the *Cystic Fibrosis 32 Mutations Panel* (CF32M) through ARUP Laboratories for routine screening. <http://ltd.aruplab.com/Tests/Pub/2001933>. This panel meets the recommendations of ACOG and ACMG. <http://www.acog.org/Resources-And-Publications/Committee-Opinions/Committee-on-Genetics/Update-on-Carrier-Screening-for-Cystic-Fibrosis>.

For higher risk cases, the Cystic Fibrosis Plus Panel (CFDNA) 97 *Mutations* from Integrated Genetics is available.

For additional information on cystic fibrosis laboratory screening options, please contact Dr. Paul Rothberg at 273-2229.
