STAT

REQUIRED (PRINT OR PATIENT LABEL)

Name (Last, First, MI)

Date of Birth: _____ Sex: (circle) M F

Street Address

Street Address 2

City, State, Zip

Phone Number: _____ Chart Number: _____

Phone Results to: _____ Fax Results to: _____

Ordering Provider's Signature _____
Date of Signature _____

Diagnosis Mandatory: Signs/Symptoms or ICD10 Codes
If ordered for screening, list test name here and write "SCREENING" after it

Send Additional Reports To: (Full Name/Address) _____

Compliance is Mandatory and Regulated. For the laboratory to bill properly and receive payment for tests ordered on Medicare Beneficiaries, specific ICD-10 code(s) or a descriptive diagnosis must be included on each patient for each test ordered. It is critical that the diagnosis provided to the lab is consistent with those recorded in the patient medical record on the date of service.

Clinical History

Molecular Diagnostic Laboratory

Molecular Genetics (Signed Consent Required)

(Specimen) Blood Bone Marrow Other _____

47831 Factor V Leiden

23052 Prothrombin G20210A Mutation

33124 HFE C282Y, H63D, AND S65C Mutations (Hemochromatosis)

PATIENT CONSENT

HEALTHCARE PROVIDER CONSENT

I have read the information on the back of this form and discussed it with my health care provider have been given the opportunity to ask questions and have them answered about the tests ordered. I authorize collection and analysis of the necessary sample(s).

Patient/Legal Guardian: _____ Date: / /

I attest that I have reviewed the requirements for genetic testing order on the requisition with the patient. I have conveyed the required information to the patient and obtained consent.

Health Care Provider: _____ Date: / /

Patient Information Sheet

Informed Consent for Genetic Testing

1. These tests look for changes in DNA, chromosomes, genes or gene products that are known to be associated with risk of specific diseases. The purpose of these tests is to help your doctor more accurately diagnose your current condition and/or future risk of disease.
2. In addition to assisting in making a diagnosis, these tests may reveal a genetic pre-disposition for one or more of these diseases. You may wish to get genetic counseling before consenting to this test. If a positive result is obtained, additional testing and/or genetic counseling follow-up may be advised.
3. Your doctor has ordered one or more of the following tests:

FACTOR V LEIDEN - This is a test for a variation in another gene that affects blood clotting. If this variant is present, it may indicate a higher than average risk for developing blood clots.

PROTHROMBIN GENE MUTATION - This is a test for a variation in another gene that affects blood clotting. If this variant is present, it may indicate a higher than average risk for developing blood clots.

HEMOCHROMATOSIS MUTATIONS - This is a test for a variation in a gene that controls iron storage in the body, and helps to diagnose hereditary hemochromatosis, a disease of iron overload.

4. The results of these genetic tests assist in diagnosis, but do not by themselves permit diagnosis of a disease condition. Genetic testing is ordinarily highly accurate; however, in some cases results may not be obtained or may be inconclusive. Only certain variations in these genes are known and available for testing, so a "normal" result in these genetic tests cannot guarantee that you do not have or will not develop a particular disease. Some genetic tests are only done by a few laboratories in the world, and may need to be sent to out of state laboratories that are not certified by New York State Health Department. In some instances, the clinical utility of the test may not be established.
5. Because interpretation of genetic test results is complex, the test results will be provided to your physician who will inform you of the results. To the extent permitted by law, all of the records and results of this testing are confidential and will not be released to anyone other than you, your referring doctors, and Strong Memorial Hospital Medical Records without your consent.
6. Besides providing excellent medical care, one of the missions of the University of Rochester and Strong Memorial Hospital is advancing medical science. Our doctors learn about better ways to care for patients and improve the health of people. No tests other than those authorized will be performed on your sample, and your sample will be destroyed after testing or not more than sixty days after the sample is taken, unless you consent to allow us to use the remaining sample for research. With your consent, our researchers will be able to use the remaining part of blood samples not needed for the specific tests above for approved development of new or improved laboratory tests. Names and other identifying information are kept strictly confidential. Samples with consent for research are stored indefinitely. We sometimes conduct follow-up studies based on new medical information. If you are eligible, someone will contact you personally. Participation in such studies is voluntary.
