

Immune Status Panel-MMR/V IgG Antibody: New Ordering Option

Date: January 20th, 2026

Effective Date: January 21st, 2026

An Immune Status Panel which includes individual tests for IgG antibodies to Measles, Mumps, Rubella and Varicella-Zoster has been created to simplify test ordering and correct test selection. The Immune Status Panel for MMRV can be used to document the presence of IgG antibodies to these viral agents in individuals who have had natural infection or immunization. If desired, the tests can continue to be ordered individually.

Test Name: Immune Status Panel – MMR/V IgG Antibody
Test Code: MMRV

Note that these tests are **not** to be used for diagnosing acute infection. For diagnosing acute infection caused by one of these agents, specific IgM antibody test should be considered.

For questions or additional information, please contact Lindsay Ryan-Muntz, Serology/Immunology Supervisor, (Lindsay_Ryan-Muntz@URMC.Rochester.edu).
