

## TIBC/Transferrin Saturation Calculations

### Update

Date: October 10<sup>th</sup>, 2025

---

Effective Date: November 10<sup>th</sup>, 2025

Using data from the University of Rochester Medicine patient population, as well as further peer research, it has been determined that the UR Medicine laboratories will resume reporting Total Iron Binding Capacity (TIBC) and Transferrin Saturation (FESAT) for patients with Ferritin values greater than 1200 ng/mL. The potential negative bias on these calculations is small and likely clinically insignificant.
