Take an Aspirin (or Two) and Call (or Text or Email) Me (or Us) in the Morning (or Later)

Michael Mendoza, MD, MPH
Medical Director at Highland Family Medicine and Assistant Professor in the Departments of Family Medicine and Public Health Sciences

Aspirin treatment used to be simple. The emerging body of clinical and public health evidence -- and the ever-complicated settings in which this evidence might apply -- has forced clinical medicine and public health to reconsider our assumptions about this deceptively simple pill. Dr. Mendoza will review what we know and don't know about aspirin, and how these controversies represent an opportunity to rethink how we translate evidence into practice in a new era of population health.

Friday, November 7, 2014
Helen Wood Hall Auditorium (1W304)
12p – 1p

Assorted wraps will be available while supplies last. Bring your own beverage.
