Prevent and Control High Blood Pressure:

What you should know about preventing and controlling high blood pressure

High blood pressure (also called hypertension) increases your chances of having a heart attack, heart failure, stroke, kidney disease, and other life-threatening illnesses. Anyone can get it, and as you get older, the likelihood of your developing high blood pressure increases. If you are overweight or obese or if you have diabetes, the odds are even higher.

KNOW YOUR NUMBERS
High blood pressure is called “THE SILENT KILLER” because there are often no symptoms. Your numbers are your only warning.

Normal blood pressure
The pressure of blood in the vessels when the heart beats: systolic pressure

120/80 mmHg

The pressure between beats when the heart relaxes: diastolic pressure

High blood pressure
140/90 mmHg or higher

Prehypertension
120/139 and/or 80-89 mmHg

Normal blood pressure
less than 120/80 mmHg

If you want to learn more about high blood pressure, contact your doctor or make an appointment with one of our cardiologists by calling 866-HEART-03. Or visit heart.URMC.edu
