

IUI Scheduling

LH testing: Patients using urine LH testing (ovulation predictor kits) should use the following guidelines:

- Sunday through Friday, use ovulation predictor test kit once daily (NOT the first urine of the morning). Call with a positive result and schedule IUI for the following day
- Saturday, use test kit in the AM, preferably not the first urine of the morning, and call immediately with a positive test result to schedule an appointment the same day (Saturday). Calls must be received by 9:00am to accommodate same day scheduling.
- Call the Andrology line (585) 487-3378, Option #3 to schedule IUI. Messages left on this line will be checked Monday through Saturday. Messages left after 1pm on Saturday or on Sundays will be checked Monday morning.
- For holidays that fall on a Monday the office will be open on Sunday and closed on Monday. In this circumstance, test in the AM on Sunday for a same day IUI appointment

Ovidrel injection: Patients using Ovidrel “trigger shot” to schedule IUI should use the following guidelines:

- Patients being instructed to take Ovidrel injection will take the injection at 9 pm and schedule their IUI for the second morning following that injection, unless otherwise instructed.
- Patients being instructed to take Ovidrel injection on Friday will take the injection at 9 pm and schedule their IUI appointment for the following morning (Saturday). Patient will be instructed to have intercourse on Sunday if indicated.

Lab values: Patients using lab work to schedule IUI should use the following guideline:

- You will specifically be advised by a nurse regarding when to schedule IUI appointment.
