

I recently attended the Mechanisms of Eukaryotic Transcription Meeting in Cold Spring Harbor, New York, where I had the opportunity to share my research on Integrator and other transcription machinery with an international community of scientists. The meeting featured engaging talks and poster sessions that deepened my understanding of current advances in the field and introduced me to new techniques I hope to apply in my work.

One of the most valuable aspects of the conference was the chance to connect with other researchers at different stages of their careers. I had meaningful conversations with faculty, postdocs, and fellow graduate students that provided scientific insight and professional guidance. I am grateful to GWIS for supporting my attendance at this meeting. The experience broadened my perspective, strengthened my research network, and inspired me to continue pursuing my work with new ideas and enthusiasm.
