

## Lead poisoning can cause lifelong health problems

### Here are a few things you can do as a parent/guardian:

#### **Talk with your child's school**

Ask the teachers to monitor your child's learning and behavior

#### **Talk with your child's doctor**

If your child has a venous blood lead level over 5  $\mu\text{g}/\text{dL}$ , your child needs extra developmental and behavioral screening

#### **Be your child's advocate**

- Children birth to age 3 years can get services through Early Intervention
- Children 3 to 5 years and over 5 years can get services through the school district. Your child can benefit by getting services early.
