community partners to make neighborhoods
healthier.*

MEDICINE of THE HIGHEST ORDER

PLC/MPLC Rotation

The Pediatric Links with the Community (PLC) Program was founded in 1996, and has trained **836** doctors in a required rotation where they learn first-hand about critical factors affecting child health while interacting with medical and non-medical providers at various community-based organizations in the Rochester area. PLC is an elective for Medical Students: PEDS 662. It is also a selective for students on the third year clerkship.

CARE Track & Global CARE

The Community Health & Advocacy Resident Education (CARE) Track is an elective longitudinal experience starting in the second year of residency. **193** young doctors have participated. CARE starts with a two-week experience which covers the essentials of health policy, evidence-based public health, cross cultural communication, leadership and other areas. It is followed by a 2-3 year longitudinal project in collaboration with a community partner. CARE project areas are determined by residents' interests. CARE Block is offered to medical students as an elective: PEDS 661.

Recent CARE project topics include:

- Vaccination information
- Literacy
- School Success
- Obesity Prevention
- Connection to Community-Based Resources
- Global Health (Reduction of Malaria and Infant Mortality)
- Support for Refugees
- Safe Sleep and Sleep Hygiene

Ongoing CARE Project Examples Cyclopedia

The photo on the front of this brochure is from a bicycling program called Cyclopedia that continued for several years in Rochester. The founder of the program, Dr. Cappy Collins, left for New York City and it is still rolling along there now.

The CARE project of Dr. Megan Lasaponara and Dr. Catherine Agricola continues as Kids Thrive 585, a nonprofit that empowers those who advocate for children to connect with committed community-based organizations in the greater Rochester area. As of 2020, there is also a Thriving Forward podcast!

Check out our podcast at

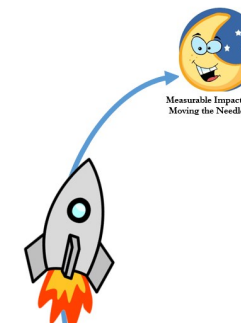

<https://kidsthive585.org/thriving-forward-podcast/>

The LARC Initiative

With help from the Bloom Family Trust, we had the opportunity in 2012 to try to scale up a project with a community-level impact. Starting with the Evidence-Based Contraceptives for Teens project, which was led by Dr. Hilary Yehling and Dr. Anne Huber, we designed the LARC (Long Acting Reversible Contraception) Initiative for unintended teen pregnancy prevention. With support from the Greater Rochester Health Foundation and in partnership with numerous community partners, the impressive impact of our initiative has received national attention with the 2020 publication of an evaluation article in the American Journal of Obstetrics and Gynecology (AJOG); free to download at: <https://www.sciencedirect.com/science/article/pii/S0002937820300375>.

Project Launchpad

PLC and CARE have won numerous national awards for teaching community health and advocacy. But too few of our projects continue long-term. We would like to scale up more projects into community programs, as we did with the LARC Initiative. To make that happen we need to increase our capacity for implementation with a project "launchpad." By connecting with existing resources and organizations, the Hoekelman Center can use simple, upstream, evidence-based solutions to help solve daunting community health problems affecting children in Rochester and beyond.

For more information on how you can help achieve our mission, please visit us in person or online at www.hoekelmancenter.org.
